

Task 0

The screenshot shows a Windows desktop with a Claude AI chat window on the left and a terminal window on the right. The Claude window displays instructions for setting up a git-catalog-sync project on Windows, including cloning three repositories (git-catalog, sync-cavan-rhouge, clone-b, clone-c) and creating a screenshots folder. It also provides a task description for 'Clone A: grace period' and a code snippet for a bash script. The terminal window shows the execution of these commands, including cloning the repositories and creating the screenshots folder.

Setting up git-catalog-sync on Windows

You now have 3 folders sitting next to each other: `git-catalog`, `sync-cavan-rhouge` (Clone A), `clone-b`, `clone-c`.

Also make a screenshots folder now:

```
bash
mkdir git-catalog-sync-cavan-rhouge/screenshots
```

Task 1 — Clone A: grace period

```
bash
cd git-catalog-sync-cavan-rhouge
git checkout feature/late-fee-policy
```

Open the project folder in a code editor (VS Code is fine — right-click folder → "Open with Code", or just open the file in Notepad). Find the file with `calculateLateFee` in it. Add logic so that if `daysLate <= 1`, the fee is 0 (no fee). Save it.

```
bash
git add .
git commit -m "Add 1-day grace period before late fees apply - cavan.rhouge"
git push
```

Screenshot now (whole screen showing the successful push) → save into the `screenshots` folder as `task1.png`.

Task 2 — Clone B: rounding (gets rejected)

+ Write a message...

Task 2 — Clone B: rounding (gets rejected)

+ Write a message...

Claude is AI and can make mistakes. Sonnet 5 Medium

Task 2

Step 4 — Commit and push (should get rejected this time)

```
bash
git add .
git commit -m "Round late fee instead of truncating - cavan.rhouge"
git push
```

Expected outcome for the commit: something like
[feature/late-fee-policy xxxxxxx] Round late fee instead of truncating - cavan.rhouge

Expected outcome for the push (this is the important one): it should fail, with a message like:

```
[rejected] feature/late-fee-policy -> feature/late-fee-policy (fetch first)
error: failed to push some refs...
hint: updates were rejected because the remote contains work that you do not have locally.
```

Take your Task 2 screenshot here — this rejection is the whole point of Task 2.

✗ If instead it says "Everything up-to-date" or pushes successfully — stop and paste me the output, don't continue to Task 3 yet.

Run those 4 steps and paste me the actual output at Step 4 (the push). Once I confirm it rejected correctly, I'll give you Task 3's steps the same way.

Terminal Output:

```
Administrator@PC42 MINGW64 ~/Downloads/clone-b (feature/late-fee-policy)
$ git add .
$ git commit -m "Round late fee instead of truncating - cavan.rhouge"
$ git push
warning: in the working copy of 'catalog.js', LF will be replaced by CRLF the next time Git touches it
[feature/late-fee-policy f83b3d] Round late fee instead of truncating - cavan.rhouge
To https://github.com/CavanHicks/git-catalog-sync-cavan.rhouge.git
 ! [rejected] feature/late-fee-policy -> feature/late-fee-policy (non-fast-forward)
error: failed to push some refs to 'https://github.com/CavanHicks/git-catalog-sync-cavan.rhouge.git'
hint: updates were rejected because the tip of your current branch is behind
hint: its remote counterpart. If you want to integrate the remote changes,
hint: use 'git pull' before pushing again.
hint: See the 'note about fast-forwards' in 'git push --help' for details.
Administrator@PC42 MINGW64 ~/Downloads/clone-b (feature/late-fee-policy)
$
```

Task 3

Step 7 — Mark the conflict resolved, commit, and push

```
bash
git add .
git commit -m "Merge grace period and rounding - cavan.rhouge"
git push
```

Expected outcome:

- The commit line looks like: [feature/late-fee-policy xxxxxxx] Merge grace period and rounding - cavan.rhouge
- The push line looks like: d944b38..xxxxxxx feature/late-fee-policy -> feature/late-fee-policy with no rejection error.

✗ If you get any error, paste it before doing anything else.

Once that succeeds, check your prompt — it should no longer say [MERGING] (it'll just say ([feature/late-fee-policy]), confirming the merge is fully done.

Terminal Output:

```
Administrator@PC42 MINGW64 -
$ cd ~/Downloads/clone-b
$ node test.js
PASS: a positive days-late value is valid
PASS: a negative days-late value is invalid
PASS: late fee for 5 days at $2.25/day

Administrator@PC42 MINGW64 ~/Downloads/clone-b (feature/late-fee-policy(MERGING))
$ git add .
$ git commit -m "Merge grace period and rounding - cavan.rhouge"
$ git push
warning: in the working copy of 'catalog.js', LF will be replaced by CRLF the next time Git touches it
[feature/late-fee-policy 21e0ba] Merge grace period and rounding - cavan.rhouge

Administrator@PC42 MINGW64 ~/Downloads/clone-b (feature/late-fee-policy)
$
```

The screenshot shows a Windows desktop with a taskbar at the top. The active window is titled "Task 4" and contains a Claude AI chat interface. The chat shows a conversation about setting up a git-catalog-sync on Windows. The Claude interface includes a sidebar with navigation options like "New", "Projects", "Artifacts", "Code", and "Customize". The main chat area displays a message from Claude about expected outcomes for a commit and a push, and a rejection message. The user's response is partially visible at the bottom.

Overlaid on the right side of the Claude window is a terminal window titled "MINGW64 C:\Users\Administrator\Downloads\clone-c". The terminal shows the output of a git pull command, which results in a rejection message because the local branch is ahead of the remote. The terminal text is as follows:

```

MINGW64 C:\Users\Administrator\Downloads\clone-c
$ git pull --rebase
hint: See the 'Note about fast-forwards' in 'git push --help' for details.
Administrator@MINGW64: ~/Downloads/clone-c (feature/late-fee-policy)
$ git pull
Administrator@MINGW64: ~/Downloads/clone-c (feature/late-fee-policy)
$ git add
$ git commit -m "Add 20 dollar maximum fee cap - cavan.rhogue"
git push
To https://github.com/CavanMike/git-catalog-sync-cavan-rhogue.git
Your branch is ahead of 'origin/feature/late-fee-policy' by 1 commit.
(Use 'git push' to publish your local commits)
Pushing to commit: working tree clean
To https://github.com/CavanMike/git-catalog-sync-cavan-rhogue.git
[rejected]        feature/late-fee-policy -> feature/late-fee-policy (fetch first)
error: failed to push some refs to: 'https://github.com/CavanMike/git-catalog-sync-cavan-rhogue.git'
hint: Updates were rejected because the remote contains work that you do not have locally.
hint: Use 'git pull' before pushing again.
hint: See the 'Note about fast-forwards' in 'git push --help' for details.
Administrator@MINGW64: ~/Downloads/clone-c (feature/late-fee-policy)
$
  
```

The taskbar at the bottom shows several open applications: "Resource Center", "Setting up git-catalog...", "Welcome - Visual Studio", "Downloads", "Pondo", "MINGW64 C:\Users\A...", "Screen Lock", "Call for Assistant", "Change PC", "Check Balance", "Packages", and "Check Out". The system clock in the bottom right corner shows the date as 11/11/2023 and the time as 5:40 PM.

Setting up git-catalog-sync on Windows

bash

```
node test.js
```

Expected outcome: All PASS lines, no failures.

Step 7 — Mark resolved, commit, and push

bash

```
git add .
git commit -m "Merge fee cap with grace period and rounding - cavan.rhogue"
git push
```

Expected outcome:

- Commit: [feature/late-fee-policy xxxxxxx] Merge fee cap with grace period and rounding - cavan.rhogue
- Push: succeeds with no rejection, something like [b96984...xxxxxxx feature/late-fee-policy -> feature/late-fee-policy]

Take your Task 5 screenshot after this successful push.

Run Steps 4-7 and paste me the outputs (especially the test result and push result), and I'll walk you through Task 6 next.

Task 6

Task 7

The screenshot shows a Windows desktop environment. On the left, a Claude chat window is open, displaying a conversation about setting up git-catalog-sync on Windows. The chat includes a sidebar with a list of projects and a main area with instructions and a code block. On the right, a terminal window is open, showing the execution of git commands. The terminal output includes the following commands and their results:

```
Administrator@PC42 MINGW64 ~/Downloads/git-catalog-sync-cavan-rhouge (main)
$ git pull origin main
From https://github.com/CavanMike/git-catalog-sync-cavan-rhouge
* branch      main       -> FETCH_HEAD
Already up to date.

Administrator@PC42 MINGW64 ~/Downloads/git-catalog-sync-cavan-rhouge (main)
$ git merge feature/late-fee-policy
Updating 1308341..8062629
Fast-forward
  =
 | 0
+-- catalog.js | 8 +-----
 2 files changed, 7 insertions(+), 3 deletions(-)
 create mode 100644 =

Administrator@PC42 MINGW64 ~/Downloads/git-catalog-sync-cavan-rhouge (main)
$ git push origin main
Total 0 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
To https://github.com:CavanMike/git-catalog-sync-cavan-rhouge.git
1308341..8062629  main -> main

Administrator@PC42 MINGW64 ~/Downloads/git-catalog-sync-cavan-rhouge (main)
$ git tag v1.0-synced
Administrator@PC42 MINGW64 ~/Downloads/git-catalog-sync-cavan-rhouge (main)
$ git tag
v1.0-synced

Administrator@PC42 MINGW64 ~/Downloads/git-catalog-sync-cavan-rhouge (main)
$ |
```

The chat window on the left contains the following text:

Setting up git-catalog-sync on Windows

Expected outcome: You should see **v1.0-synced** listed.

Step 6 — Push the tag

```
bash
git tag
```

Expected outcome: Something like:

```
To https://github.com/CavanMike/git-catalog-sync-cavan-rhouge.git
* [new tag]          v1.0-synced -> v1.0-synced
```

Take your Task 7 screenshot here — after this successful tag push.

Run Steps 1-6 and paste me the actual output, especially Steps 3, 4, and 6, so I can confirm everything's correct before we move to writing WORKFLOW.md.
